

# Product Specification Sheet

<b>Product Name</b>	<b>pLenti-CMV-MCS-EF1<math>\alpha</math>-RFP-T2A-PURO Lentiviral Expression Vector</b>
<b>Description</b>	<p>Lentivirus vector based on the human immunodeficiency virus-1 (HIV-1) has become a promising vector for gene transfer studies. The advantageous feature of lentivirus vector is the ability of gene transfer and integration into dividing and non-dividing cells. The pseudotyped envelope with vesicular stomatitis virus envelope G (VSV-G) protein broadens the target cell range. Lentiviral vectors have been shown to deliver genes to neurons, lymphocytes and macrophages, cell types that previous retrovirus vectors could not be used. Lentiviral vectors have also proven to be effective in transducing brain, liver, muscle, and retina in vivo without toxicity or immune responses. Recently, the lentivirus system is widely used to integrate siRNA efficiently in a wide variety of cell lines and primary cells both in vitro and in vivo. Lentivirus particles are produced from 293T cells through transient transfection of plasmids that encode for the components of the virion. Our third generation lentiviral systems have been designed for increased researcher safety. pLenti-CMV-MCS-EF1<math>\alpha</math>-RFP-T2A-PURO Lentiviral Expression Vector contains CMV promoter ahead of the multiple cloning sites (MCS) with tdTomato reporter and puromycin resistant gene driven by EF1<math>\alpha</math> promoter.</p>
<b>Catalog Number</b>	LV121
<b>Size</b>	10 $\mu$ g at 0.5 $\mu$ g/ $\mu$ L in TE
<b>Shipping</b>	Room temperature
<b>Storage and Stability</b>	Store at -20°C immediately upon receipt. This product is stable for 6 months when stored as directed.
<b>Quality Control</b>	This plasmid is sequence verified.
<b>Safety Precaution</b>	Remember that you will be working with samples containing infectious virus. Follow the recommended NIH guidelines for all materials containing BSL-2 organisms. The ALSTEM Lentiviral Expression System is designed to minimize the chance of generating replication-competent lentivirus, but precautions should still be taken to avoid direct contact with viral supernatants.
<b>Restricted Use</b>	For Research Use Only. Not for use in diagnostic or therapeutic procedures.

## Vector Information

This is a lentiviral expression vector that contains all elements for efficient and high yield viral production and a functional cassette consisting of tdTomato reporter and puromycin resistance gene driven by EF1 $\alpha$  promoter to assist your detection and selection. The multiple restriction enzyme sites are designed for convenient cloning of your chosen reporter and gene of interest that are under the control of CMV promoter for ubiquitous expression.

*Note: Bacterial culture of pLenti vectors should be done in medium containing **10  $\mu$ g/mL** Ampicillin. For maximal plasmid yield and quality, we recommend *Stbl3* competent cells (Invitrogen).*

### IMPORTANT NOTICE

Store the vial at -20°C immediately upon receipt.
